Pierre VIPREY

Full Stack developer Java/Angular

I graduated from a french bachelor in computer science. Afterwards I made two extra years in order to specialize as full Stack developer. During my graduation I was on a work-study program for two years, allowing me to work in industry such as Bank, Pharmaceutic and Customer Communication Management.

Work experiences

- **Work-study Full Stack developer**
  From Sept. 2024 to Sept. 2025 SEFAS Ivry-sur-Seine (FR)
  I discovered and learned **NgRx** and have worked on updating the frontend with the new API from the backend. Sometimes needing to recreate pages nearly from scratch. From a specific case occuring with one of our client, I updated our Java **backend** and **SQL query**, allowing us to reduce the number of request and the **execution time**.
- **Work-study Full Stack developer**
  From Sept. 2023 to Dec. 2023 Genomic Vision Bagneux (FR)
  I was involved in the **migration** of the website from AngularJS to the latest Angular version.
  I also worked on creating a local stylesheet library and documentation, **reducing** by half the size of every file and **homogenizing** it at the same time.
  I provided a **new version** of the log page, based on the needs of the team and through a **few iteration** before launching the update.
- **Work-study Full Stack developer**
  From Oct. 2022 to Aug. 2023 SKAIZEN GROUP Paris (FR)
  I was working on a Proof of Concept in order to utilize AI against banking fraud. I was participating and developping from the very early stage of it, allowing me to work on the creation of the **SQL database**. The backend was performed with **Java Spring**, construct within an **Agile** team and a **TDD** approach. The testing environment was using an **H2 in-memory database**.

Education

- **Mastère Apprenticeship Developer Manager Full Stack**
  From Sept. 2023 to July 2025 EFREI Villejuif (FR)
- **IT Bachelor**
  From Sept. 2017 to July 2022 Université de Bourgogne-Franche-comté Besançon (FR)
  With an one-year off in 2018/2019

Personal experiences

- **Volunteer association for student**
  From Mar. 2021 to Sept. 2022 Les Josettes Bisontines Besançon (FR)
  "Les Josettes Bisontines" was a local association aiming at providing food, clothes and personal care products.
  During this time I became the creator and administrator of our website, accumulating over **1,200 views** in a single year.
  In parallel of updating I was participating in the collects and distributions.
- **Nuit de l'info**
  From 2018 to 2022
  In december of every year except 2019. "La Nuit de l'Info" is a national challenge for students to create a website within a night based on a challenge announced only minutes before. During the challenge, teams are invited to register for secondary challenges, thoses are very broad such as hosting website with the lowest carbon footprint possible or including a specification with the website.
  In 2021 my team and I managed to rank second in a secondary challenge, incorporating an easter egg within our website.
